Company Overview

SGC Metering operates exclusively in the oil & gas sector. We specialise in the design and manufacture of computer solutions for fiscal metering, custody transfer metering and hydrocarbon allocation systems. Our innovative approach to systems integration, using state of the art hardware and software technologies, has firmly established our market position.

Position – Flow Metering Support Engineer

Role: Support SGC Flow Metering Computer Systems / Products primarily on Client sites.

Responsible to:

- Support Services Manager

Responsible for:

- Installation, commissioning, and maintenance of SGC Flow Metering Computer Systems in field applications
- Performing health checks on SGC Flow Metering Computer Systems in field applications
- Performing in-house testing and fault finding on SGC Flow Metering Computer Systems

The position will form a key role within the support services team with the majority of the time spent on client's sites, both on-shore and off-shore. Persons who have held a similar technical role, or have a metering background, who wish to advance their career, would be most suitable. This position offers the candidate an opportunity for worldwide travel.

Ideally, candidates should be qualified to HND/Degree level, with experience in some of these:

- SCADA system programming/configuration.
- PLC system programming/configuration.
- Oil and Gas flow measurement.
- Software engineering.
- Process instrumentation and automation.
- Communication skills (verbal & written).

An enthusiastic person with some of the above attributes would receive encouragement and training in developing their skills to fulfil this demanding and exciting role.

Salary

Negotiable, depending on experience.

Benefits

- Non contributory pension scheme.
- Health care insurance scheme.
- Death in service benefit.
- Discretionary bonus scheme.
