## **Company Overview**

SGC Metering operates exclusively in the oil & gas sector. We specialise in the design and manufacture of computer solutions for fiscal metering, custody transfer metering and hydrocarbon allocation systems. Our innovative approach to systems integration, using state of the art hardware and software technologies, has firmly established our market position.

## **Position – Software Project Engineer**

**Role:** To manage, design, build, and test assigned projects.

### **Responsible to:**

- Projects Manager

### **Responsible for:**

- Provision of project software design.
- Implementation and test of project tasks.
- When requested, to assume role of lead engineer with overall technical responsibility for the project and to be the main client focal point for technical matters.
- Ensuring compliance to agreed production plan.
- Mentoring and training of new recruits.

Working within the projects group, the position requires individuals who are capable of development and implementation of detailed system designs based on functional requirements and industry standards. Depending on project size, candidates may need to manage all aspects of the project including client interface, or work as part of a team under a project manager.

Candidates should be qualified to HND / Degree level, with experience in some of these:

- SCADA system programming/configuration.
- PLC system programming/configuration.
- Oil and Gas flow measurement.
- Software engineering.

An enthusiastic person with some of the above attributes would receive encouragement and training in developing their skills to fulfil this demanding and exciting role.

## **Salary**

Negotiable, depending on experience.

## **Benefits**

- Non contributory pension scheme.
- Health care insurance scheme.
- Death in service benefit.
- Discretionary bonus scheme.
